Caller ID Showing as SPAM

When starting services with Fireline Communications we will submit your Caller ID to the Caller ID National Registry at your request. The request can be submitted through the number porting form or included in your request for new telephone numbers. The Caller ID National Registry is used by all providers to obtain and provide Caller ID information to their customers. Providers usually pull the information into their databases on a regular schedule, daily, weekly or monthly. If your Caller ID is showing as SPAM when you call certain people, it will need to be reported to the receiver's telephone provider.

You can submit the request to remove your number from a provider's SPAM database usually via the internet.
