

Mean Option Score (MOS)

MOS Score	Grade	Color
>= 4.3	A	Green
>= 4.0	B	Green
>= 3.6	C	Orange
>= 3.1	D	Orange
< 3.1	F	Red

MOS score is a measure of voice quality that ranges from 1 to 5, with 5 being the best. Public Switched Telephone Network (PSTN) has a MOS score between 4 and 5. The mean option score is a statistical measure that takes into account each individual score and finds the average. It is the best choice in terms of accuracy if there are no outliers in the data set. If outliers exist, the median or mode may be more accurate since the results won't be skewed.

The MOS column displays information about the call quality for a specific CDR report. The value in this column represents the average score for all the channels included in the call, denoted by a number and its corresponding grade. This score estimates call quality by taking into account the Round-Trip Time (RTT), Jitter, and Packet Loss.
